Project OverView:

Karigar Inventory Management System is the combination of technology, processes and procedures that oversee the monitoring and maintenance of stocked products, whether those products are company assets, raw materials and supplies, or finished products ready to be sent to vendors or end consumers. Our Inventory management software provides a central database and point of reference for all inventory, coupled with the ability to analyze data, generate reports, forecast future demand, and more.

Karigar IMS oversees the flow of products as they move from the manufacturer to the warehouse and then to the point of sale. The key function is to keep a detailed record of each new or returned product as it enters or leaves a warehouse or point of sale.

Features

- Dashboard Preview
- Supply chain Management
- Product Management Module
- Inventory Management Module
- Stock Transfer & Adjustment Module
- Expense Calculator Module
- Comprehensive Reporting Module
